

# *Afloat 2.0*

**adds some nice features to most  
Mac apps.**

**This guide explains where to find them and  
how to use them.**

(but before we continue, an important hint if you want to explore on your own:

**look in the Window menu of your favorite application, and you will find Afloat's commands there – they have a cloud badge before their title.**

If you don't find them, it's likely Afloat doesn't work with that application. Carbon applications like the Finder and iTunes won't work, but Cocoa apps like Safari and iChat will.)

## Keep Afloat

puts a window always on top of all others.

**menu:**

Window >  
Keep Afloat

**keyboard:**

^ ⌘ A

**macbook air/pro:**

^ ⌘ + swipe up or down  
with three fingers.

## Transparency

lets you see through a window.

### menu:

Window >  
Transparency

### keyboard:

^ ⌘ + page  
up or page  
down

### mouse:

^ ⌘ + scroll up  
or down with  
the wheel.

### macbooks:

^ ⌘ + scroll up  
or down with  
two fingers.

## Drag Anywhere

lets you move a window by “grabbing” it from anywhere (not necessarily the title bar).

**keyboard + mouse:**

^ ⌘ + drag the window  
from anywhere inside it.

## Resize Anywhere

lets you resize a window by “grabbing” it from any point (not just the bottom-right corner).

### **keyboard + mouse:**

^ ⌘ + drag the window with the mouse button.

### **macbook:**

^ ⌘ + drag the window with two fingers.

## On All Spaces

makes a window remain on the screen even if you switch Spaces.

**menu:**

Window >

Adjust Effects.

## Overlay

makes a window floating and transparent and makes it ignore your mouse clicks (they “fall through” to the windows below it instead).

**menu:**

Window >

Adjust Effects.

## Show Window's File in Finder

if a window represents an open file, it will show the file in Finder (it's got a keyboard shortcut for you keyboard addicts).

**menu:**

Window > Show  
Window's File in  
Finder.

**keyboard:**

⌘⇧↑

## Pin to Desktop and more.

Look in the Adjust Effects pane of your window for more.

### **menu:**

Window >  
Adjust Effects

### **keyboard:**

^⌘F
